■ Initial Settings

XX To use the wireless sharing function provided with this product, Windows Vista must be running on your computer and a wireless LAN access point (AP) must be in your vicinity. (For Windows XP users, Windows Media Player 11 is required and must be installed on your PC.)

1. Choose Your Language

Turn on your Digital Photo Frame and select a language. The selected language is used as the OSD language and for the "Samsung Photo Frame Web Confi guration" which is embedded in your Digital Photo Frame. You can change the language via Settings -> Language.

2. Choose Your WiFi Network

A list of APs is displayed. (If there are no APs displayed, click "Refresh Networks" to update the list.)

Select an AP to connect to and the connection state is displayed in a popup window and the "Choose Computer" screen will appear.

3. Choose Computer

A list of PCs is displayed. (If there are no PCs displayed, click "Refresh List" to update the list.) Select a PC to connect to and the Main screen will appear.

- Ensure that the Settings are confi gured as shown below.
 Otherwise, your PC may not be displayed in the list or you may not be able to connect to it.
- ※ In Vista, select Control Panel > Network and Sharing Center > Customize. Check whether the Location type is set to Private. Select Digital Photo Frame from the Windows Media Player > Library > Media Sharing list. Check whether it is set to Allow.

Adding Photos to the Library

01 Run Windows Media Player.

OZ Click the [Library] tab at the top.

O3 Click [Add To Library] in the [Library] tab.

In the [Add To Library] window, select [My personal folders] under the [Select the folders to monitor] section and select the folder containing photos and click [Add].

Select the folder to share and click [OK] to add it.

When you click [OK], the [Add To Library] window is closed and the [Add to Library by Searching Computer] is displayed. Wait until it finishes the operation and click [Close] when it is completed.

© Checking Shared Photos

In the Windows Media Player, set the Category, which is under the [,] symbol at the top left, to [Picture].

In the [Library], select Recently added, All Pictures, Keywords, Date Taken, Rating, or Folder Settings and check whether the added photos exist in the library.

03 Sharing Settings for Accepting Connections from Your Photo Frame

In the [Library] tab, click on [Media Sharing].

In the [Media Sharing] window, check the [Share my media] checkbox under [Sharing Settings].

If no [Available device] is displayed in the [Media Sharing] window, proceed to steps 4. If displayed, proceed to step 5.

(II) Checking Network Connections

O1 Check whether the Network icon is displayed at the left top of the Main screen.

If the Network icon is displayed, proceed to the **Checking Computer Connections** section described below. If it is not displayed, move to [Settings]-[Wireless Network(SSID)].

× SSID : Service Set Identifier

In the [Wireless Network(SSID)] window, select the SSID to which you want to connect your Digital Photo Frame to. If no available SSID is displayed, click [Refresh Networks] to update the list.

If you select this when the SSID is encrypted, a password input window is displayed. You can only be connected to the network if you enter the correct password.

If the "Connected" message is displayed, it means that your Digital Photo Frame is connected to the network.

02 Checking Computer Connections

Of the screen. Check whether the PC icon is displayed at the top left of the screen.

If the PC icon[PC] is displayed, move to the Main screen. If not, move to [Settings]-[Default Computer].

In the [Default Computer] window, select the PC you want to connect your Digital Photo Frame to. If a required PC is not displayed, click on [Refresh List] to update the list and select it.

If connected, you will be returned to the [Settings] screen. You will find that the PC icon is displayed at the top left of that screen.

(13) Checking Computer Connections

1 In the Main screen, select [Photos].

In the [Photos] screen, check whether the ['Account Name's Photos' on 'Computer Name'] is correct. If incorrect, press the [Menu] button and select the PC you want to connect to.

You can view the shared photos on the connected computer via Playlists, Tags, Dates, Folders, and Ratings.

■ Viewing the Photos from Windows Live Space

(II) Checking Windows Live Space and Uploading Photos

If you have no MSN account (MSN Hotmail, MSN Messenger, Passport account), please create one. Go to and login to Windows Live Space (http://spaces.live.com/) with your MSN account.

If you do not have a space, create a space and enter it.

In your space, change to edit mode. Add albums and photos by clicking on Add under the Photos category.

102 Setting up the Web Configuration

In your Digital Photo Frame, go to [Settings][Management Web Address]. Make a note of the web
address (URL) displayed in the Management Web
Address window. Connect to that address using
Internet Explorer on your PC.

Alternatively, if you click the **Frame Manager** icon (in the tray menu at the bottom right of the PC screen, a linked frame list will be displayed. If you select a frame name, the **Samsung Photo Frame**Web Configuration screen for the corresponding

frame appears.

When connected, the Welcome page will be displayed. On the Welcome page, enter the password displayed in the [Settings]-[Management Password] screen of your Digital Photo Frame in the [Password] box and click [Sign in].

- X You can change the password (default: Admin) in the Settings of the Samsung Photo Frame Web Configuration.
- On the Samsung Photo Frame Web Configuration page, click the [Web Photos] tab and add the space address (for example, if it is 'http://test.space.live.com', you have only to type 'test'.) to the URL input box for the Photos From Windows Live Spaces list and click [Add].

(13) Checking your Space Photos on your Digital Photo Frame

First check the network connections. (Refer to Viewing the Photos Shared from Vista Windows on your Digital Photo Frame - What You Should Do on Your Digital Photo Frame - Checking Network Connections.)

In the Main screen of your Digital Photo Frame, go to [Web Photo]-[Windows Live Space]. A list of the spaces you have added to the Web Configuration will be displayed.

Select a space. A list of albums in the selected space will be displayed. Select an album, and thumbnails for the photos in the selected album will be displayed on the right.

■ Viewing the Photos via RSS

Go to the Web Photos page by following the description in the Settings Web Configuration

section for Windows Live Space. Click [Web Photo]-[Photo Feeds] for the RSS Input window. In the RSS Input window, enter the RSS address and click [Add].

What is an RSS Address?

It is the address that appears in the address box of the web page (XML) displayed when clicking the FEED icon on a RSS service site where photos are uploaded.

(I) Checking the Photos from RSS on Your Digital Photo Frame

In the Main screen of your Digital Photo
Frame, go to [Web Photo]-[RSS and Web
Feeds]. A list of feeds you have added to the
Web Configuration will be displayed.

Select a feed from the list. Thumbnails for the photos in the selected feed will be displayed to the right.

X System Requirements

• **OS**: Windows XP SP2

• System Processor Speed: 1.5 GHz

• USB: Extended Host Controller (EHCT) for USB 2.0

• **RAM**: 256 MB or above

X Caution

1. Windows XP Service Pack 2 must be installed.

It might not operate with any operating systems other than Windows XP SP2. We are not liable for problems that may occur when installing it on an operating system other than Windows XP SP2.

2. We recommend a CPU speed of 2.4 GHz or higher.

Your digital photo frame might not operate normally if the performance specifications of your PC are lower than the recommendations.

- 3. Make sure to install it correctly as directed in the Installation Guide.
- 4. Do not use your Mini-Monitor as a primary monitor.

We are not liable for any problems that may occur if you do not follow the directions. If it is used as a primary monitor, the screen may be blank.

- 5. Make sure to use the provided USB cable.
- 6. When using your digital photo frame as a Mini-Monitor, all buttons except for the Power button will not operate.
- 7. Move the programs displayed and used on the Mini-Monitor to the primary monitor after you have finished using it.
- 8. With some video cards, Mini-Monitor may not operate normally. In this case, set Hardware acceleration to Full.
 - To set Hardware acceleration to Full: Right-click on the Windows Desktop and select Properties from the displayed menu. The Display Properties window appears. Click the Settings > Advanced > Troubleshoot tab. Move the Hardware acceleration slide to Full.

X Limitation and Recommendation

- Limitation: Hardware graphics acceleration such as DirectX or OpenGL is not supported on the Mini-MonitorDisplay as it would require the emulation of a graphics processor by your standard CPU which would not be favourable. Media players which are using DirectX will not work properly on Mini-Monitor Display.
 - > Example: GOM player,VLC Player
- Recommedation : Do not use/run directX or openGL application on Mini-Monitor display.

Troubleshooting

This section lists various problems and solutions encountered by users while using the digital photo frame. When encountering a problem, first check the list below and follow the suggested action if one matches your problem. If the problem still persists, contact or visit the nearest service center.

Symptoms

Possible Causes and Suggested Actions

My Digital Photo Frame does not turn on.

- Check the power connection between the product and the power adapter.
- Check whether the Samsung logo is displayed in full screen mode when pressing the power button.

The power turns on but the screen is hlank

- Check the memory card type. If this is not inserted correctly or is not of a supported type, the photo may not display on the screen. (This product supports USB memory and CF/SD/MMC/MS/XD cards only.)
- Check the file extensions if the card and other connections are correct. (This product supports the JPEG image format, MPG1, MPEG4 and WMV9 movie formats, and MP3 music file format only. See Specifications.)

It takes some time to display an image after the digital photo frame turns on.

• Loading a file from an external memory card may take several seconds. (This depends on the file format and size.)

No screen is displayed and just sound is heard for MPEG4 and WMV9 movies.

• Loading a large sized file may take quite a long time. (This is a matter of specifications.)

The aspect ratio of the screen looks abnormal.

• Select one of the three values in the Menu>Photo Aspect>Original, Auto Fit, Fit To Width, Fit To Screen menu using the buttons on the right side of the product.

(See Menu>Photo Aspect>Original, Auto Fit, Fit To Width, Fit To Screen)

The screen color is dimmed or too strong.

• Adjust the brightness in the Settings>Brightness menu using the buttons on the right side of the product.

(See Settings>Brightness)

I have connected an external device (USB memory device or MP3 player), but it does not work.

- Check the cable connection between the product and the external device.
- Check whether the external device works as a standalone, and check the format of the files stored on it.
- Only USB devices supporting Windows CE 5.0 can be supported. Please check that your USB device supports Windows CE 5.0.

The screen is displayed but there is no

• Try to check the original movie contents file on your PC. If there is no noticeable error in the settings, it may take some time to switch

sound for MPEG4 and WMV9 movies.	• to the next file depending on the file size and format.	
The screen is displayed but there is no sound for MPEG4 and WMV9 movies.	 Try to change the Volume menu using the buttons on the right side of the product. 	
The movie freezes at some points.	 Freezing may happen depending on the status of the movie file. Breakings could happen during playback depending on the type and size of movie file.(High bps contents) Movie file formats: MPEG 4, WMV9 Resolution: Less than 1024 x 768 	
Whenever I turn my Digital Photo Frame off and on, I find the time goes wrong.	 This product has no built-in battery. When the power turns off, the time info also goes off. Therefore, you need to set time again whenever your Digital Photo Frame turns on. However, if you are connected to the Internet and Settings > Internet time update is set to Auto, the time is updated automatically. (Settings>Internet Time Update) 	
A menu is not displayed immediately when I press the menu button.	 Displaying the menu and other operations may take some time while the product is loading an image to display on the screen. 	
My Digital Photo Frame does not retrieve photos from the Internet.	 Check whether the AP connected to your Digital Photo Frame is accessible to the Internet. 	
Cannot display web photos during online services.	 The maximum file size from the Internet is 4.2 MB. (The maximum local file size is 8.5 MB.) Receiving photos over the internet The Web and Feed file format is JPEG only (over 400X240 pixels) 	
Cannot change the image ratings in the Windows Media Center in real time.	• It is possible to do so by closing and opening Windows Media Player again.	
Cannot change the ratings for the photos on my PC from my Digital Photo Frame.	 Frame Manager must be running first. After making changes, close and open Windows Media Player again 	
I changed the frame name but it hasn't been applied.	 Select and remove the shared Digital Photo Frame from the Library/Media Sharing list in the Windows Media Player and turn both your Digital Photo Frame and PC off and on. Make sure to turn on your Digital Photo Frame after your PC has booted up. 	
I cannot connect my Digital Photo Frame to the Windows Media Player on my PC.	 Check whether both your Digital Photo Frame and PC are connected to the same access point (AP). In Vista, select Control Panel > Network and Sharing Center > Customize. Check whether the Location type is set to Private. (For more information, refer to Applications > Sharing Settings for Accepting Connections from Your Photo Frame.) Select Digital Photo Frame from the Windows Media Player > Library > Media Sharing list. Check whether it is set to Allow. 	
The Frame Manager icon isn't displayed.	 Check whether a Digital Photo Frame is connected. If no Digital Photo Frame is connected, the icon is not displayed.

MPEG4 (Motion Picture Expert Group4) MPEG4 is a movie compression technology for video communications which enables implementing bi-directional multimedia. It was developed to make it possible to transmit movies over low speed lines on the Internet or for mobile communications. It is used widely on PCs, TVs and cell phones. A movie file

	formatted in the MPEG4 format is called an MPG or MPEG file.		
WMV9 (Window Media Video9)	◆ A video codec in the MPEG4 format developed by Microsoft		
MP3 (MPEG Audio Layer-3)	 MP3 is a high quality audio compression technology. It provides a 50 times higher compression than CD. Because it provides high quality and a low size for its compression ratio, it is commonly used on the Internet and for FM radio transmissions, etc. An audio file formatted in the MP3 format is called an MP3 file. 		
JPEG (Joint Photographic Coding Expert Group)	 JPEG is an image compression technology. It provides the smallest loss of all image compression technologies. It is used widely to transmit multimedia files on the Internet and for other uses. An image file formatted in the JPEG format is called a JPEG or JPG file. Usually, a JPEG file is created by taking a picture with a digital camera, by drawing on a computer, or by a graphic package and then by compressing the graphics image into the JPEG format. 		
CF Card (CompactFlash Card)	 A CF card provides a higher capacity than other types of memory card. Because the controller is embedded in the memory, it provides high compatibility. It is widely used in various digital products such as PDAs, digital cameras, MP3 players, cell phones, and notebook PCs. 		
SD Card (Secure Digital Card)	 An SD card is a Flash memory card the size of a postage stamp. It provides high stability and high capacity. It is widely used in various digital products such as PDAs, digital cameras, MP3 players, cell phones, and notebook PCs. Its appearance is similar to that of MMC, but the number of pins and their thickness is different. It also has a password setting function for data security. 		
MMC (Multi Media Card)	 MMC is external Flash memory used for small mobile devices, as in the case of the SD card. Because it has smaller footprints than SD/MMC cards, it has become widely accepted as the standard for memory cards. It is usually used to save movies and photos. 		
USB Cable 1) A-mini B type	• Use the up stream terminal when connecting to a PC. This product supports USB 2.0. An A-mini B type cable which is used to connect your digital photo frame to a PC is provided with the product. The A type is the USB connector used to connect to a PC. The B type is the USB connector used to connect to an external device. You can connect your digital photo frame to a PC using an A-mini B type USB cable.		
USB Cable 2) Cable for Connecting Other Devices	 Use this type of cable when using the down stream terminal. This product supports USB 2.0. When connecting an external device to the down stream terminal, use the USB cable provided with the external device. 		
AP (Access Point)	• When using a cell phone, you will hear frequently about a "repeater." In a wireless LAN, AP plays the same role as a repeater. That is, it a intermediate equipment through which wireless LAN cards receive signals. As a cell phone makes a call through a repeater, a wireless LAN card sends and receives data through an AP.		
SSID (Universal Plug & Play)	• SSID is a 32-bit unique identifier which is attached to each header of every packet being transmitted on a wireless LAN. It is used as a password when a wireless device connects to a Basic Service Set (BBS). Because SSID allows differentiating a wireless LAN from other wireless LANS, all APs and wireless devices that want to access to a wireless LAN must use the same SSID. If a device does not know the unique SSID of a certain BBS, it cannot connect to that BBS.
